GLOBAL QUALITY

Millard® is the European Brand specialized in high tech filtration systems for the automotive industry. Quality is the essence that inspires us, resulting in filters made for the best vehicle brands in the world.

Millard® offers to its markets, products and services with the highest quality level. Innovation and new technologies allow the vehicle fluids to work in optimal conditions to benefit a conscious energy consumption, environmental care and health of the population.

Millard® es la marca europea especializada en la fabricación de sistemas de alta tecnología en filtración para la industria automotriz. La calidad es la esencia que nos inspira en la fabricación de productos de alto rendimiento para las más acreditadas marcas a nivel mundial.

Millard® ofrece a todos los mercados, productos y servicios con el mismo y más alto nivel de calidad. Innovar y desarrollar nuevas tecnologías que permitan el funcionamiento óptimo de los fluidos en beneficio de un consumo de energía consciente y respetuoso con el medio ambiente y la salud de las poblaciones.

Millard® é a marca europeia especializada no fabrico de sistemas de alta tecnologia em filtração para a indústria automóvel. A qualidade é a essência que nos inspira para a fabricação de produtos de alto rendimento para as marcas mais conceituadas a nível mundial.

Millard® oferece a todos os mercados, produtos e serviços com o mesmo e mais alto nível de qualidade. Inovar e desenvolver novas tecnologias que permitam um óptimo funcionamento dos fluidos em benefício de um consumo de energia consciente, que respeita o ambiente e a saúde das populações.

ISO 9001 : 2015

The prestigious German firm TÜV Rheinland, known for its extensive experience in the automotive industry has granted the Certification to Millard®, giving fulfillment to the requirements established by the international norm ISO 9001:2008.

Millard® has an advanced quality assurance system: “Global Quality” that allows us to achieve the industry standards in all the products that we offer, and it’s a warranty of original equipment equivalent.

Millard® está certificada por la prestigiosa acreditadora alemana TÜV Rheinland Ibérica Inspection, Certification & Testing, según la norma UNE-EN ISO 9001-2008.

Millard® posee un avanzado sistema de aseguramiento de calidad integrado “Global Quality” que a lo largo de su cadena de producción permite obtener los mismos estándares de calidad exigidos por la industria automotriz en todos los productos que ofrece y certifica como recambios de calidad equivalente al original.

Millard® está certificada pela prestigiada acreditadora alemã TÜV Rheinland Ibérica Inspection, Certification&Testing, segundo a norma UNE-EN ISO 9001-2008.

Millard® possui um avançado sistema de asseguramento de qualidade integrado “Global Quality” que ao longo da sua cadeia de produção permite obter os mesmos standards de qualidade exigidos pela indústria automóvel em todos os produtos que oferece e certifica como sobressalentes de qualidade equivalente ao de origem.

OUR LINE OF PRODUCTS

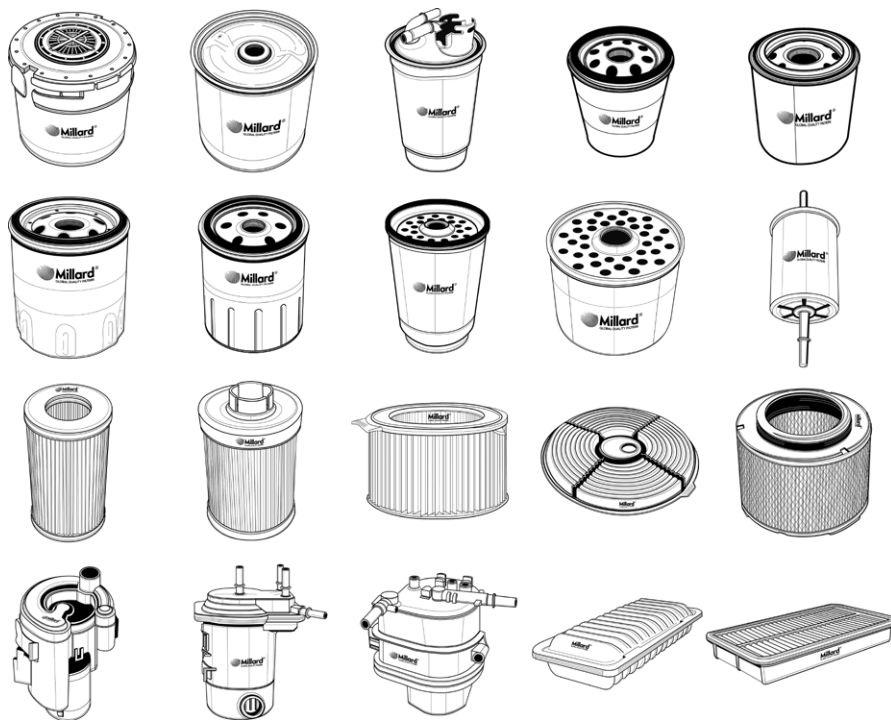

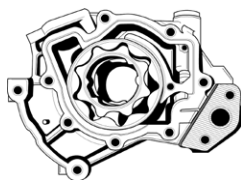

QUALITY IN DESIGN

Millard® product designs meet Automotive Manufacturer's specification requirements. Specifications are updated periodically through Design Reviews to insure perfection in materials and specifications.

QUALITY IN DEVELOPMENT

Development of a Millard® product strictly follows TS16949 norm standard which implies tools such as APQP (Advanced Product Quality Planning).

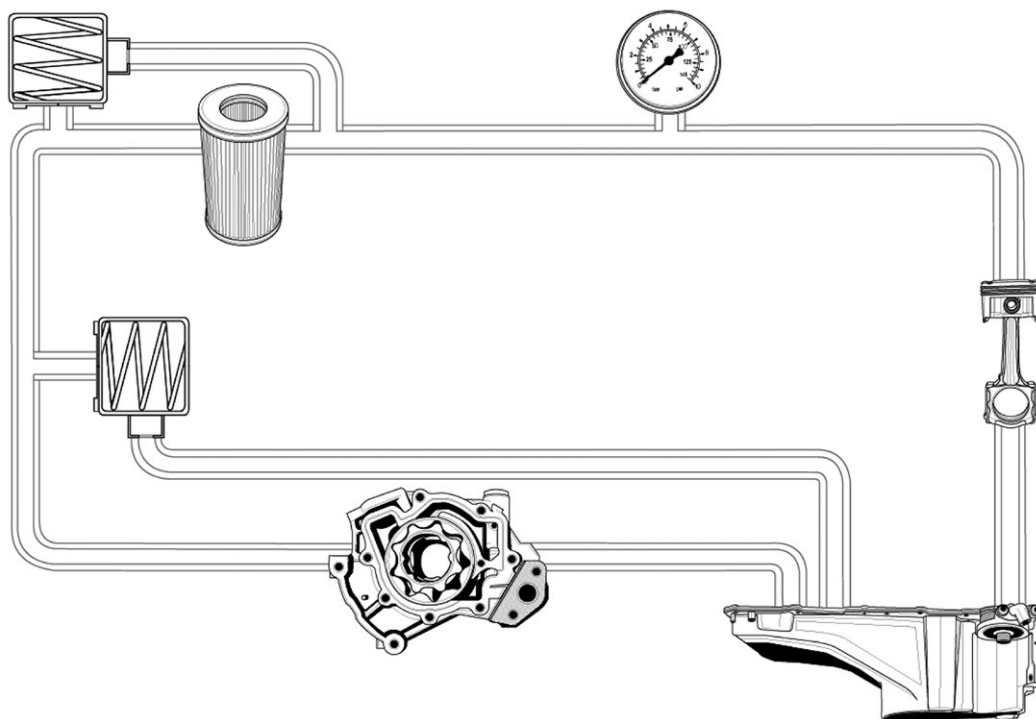

TECHNICAL DATA

QUALITY IN INDUSTRIALIZATION

Millard® strictly monitors its production in various ways, such as FMEA (Failure Mode & Effect Analysis) process tool.

QUALITY IN MANUFACTURING

Millard® sealed filters must pass leak-proof test to eliminate the chances of a defective product would reaching the market..

AIR FILTERS

Air is the most important fluid for the vehicle performance. The efficient working of the rest of the fluids (fuel and oil) depends on the quality of air absorbed by the engine. Millard's technology increases the filtration area, reduces humidity and it is high pressure resistant. Millard's air filters represent the perfect balance between nature and technology.

El aire es el fluido más importante ya que es el responsable por el desempeño de los demás fluidos, de él depende el buen funcionamiento de los motores a combustión. La tecnología de plisado Millard® permite un aumento considerable del área filtrante, la cual es resistente a la humedad y a altas presiones. Los filtros del aire Millard® representan el equilibrio perfecto entre naturaleza y tecnología.

O ar é o fluido mais importante já que é o responsável pelo desempenho dos demais fluidos, dele depende o bom funcionamento dos motores a combustão. A tecnologia de plissado Millard® permite um aumento considerável da área filtrante, a qual é resistente à humidade e a altas pressões. Os filtros do ar Millard® representam o equilíbrio perfeito entre a natureza e a tecnologia.

FUEL FILTERS

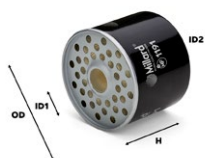

A perfect combustion needs an efficient filter, able to retain polluting agents. To this end, the cellulosic or synthetic media allows fuel to reach the optimal performance. In diesel vehicles, thanks to our pleating technology and Millard's experience in the most demanding injection and common rail systems, help to keep away the particles generated by oxidation and water condensation.

La combustión perfecta necesita un filtro capaz de retener los elementos contaminantes con eficiencia. Para tal efecto, los elementos filtrantes compuestos en material celulósico o sintético, constituidos por fibras de poliéster permiten que la gasolina alcance un alto desempeño. En los vehículos diésel la combustión perfecta es llevada a cabo gracias a la tecnología de plisado y a la experiencia de Millard® en los más exigentes sistemas de inyección convencionales y common rail. La retención de los contaminantes producidos por la oxidación y la condensación de agua permiten un óptimo nivel de funcionamiento de este fluido.

Uma combustão perfeita necessita um filtro com a capacidade de reter os elementos contaminantes com eficiência e para tal efeito o material celulósico ou sintético composto por fibras de poliéster é utilizado pelos filtros Millard® para permitir que o fluido gasolina possa conseguir um elevado nível de desempenho. Nos veículos a gasóleo uma combustão perfeita é possível graças à inovadora tecnologia de plissado utilizado pela Millard® e pela sua experiência nos mais exigentes sistemas de injeção convencionais e common rail. A retenção dos contaminantes produzidos pela oxidação, condensação de água com origem nas variações de temperatura, permite um óptimo nível de funcionamento deste fluido.

OIL FILTERS

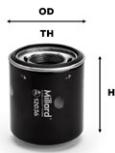

Oil reduces engine wear, cools components and protects engine from erosion. Millard's technology takes care of the engine against the particles produced in the combustion, dust and abrasive fragments which increases engine friction. At the same time, our oil filters maintain the right viscosity removing the sludge and contaminants, satisfying original equipment manufacturer's required levels.

El aceite reduce el desgaste, refrigera los componentes y protege el motor contra la corrosión. La tecnología Millard® cuida el motor de los agentes contaminantes resultantes de la combustión, polvo y partículas abrasivas que pueden crear desgaste en el motor, al mismo tiempo que mantiene la viscosidad correcta cumpliendo con los niveles exigidos por el fabricante original.

O fluido óleo reduz o desgaste, refrigera os componentes e protege o motor contra a corrosão. A tecnologia Millard® permite proteger o motor dos agentes contaminantes resultantes da combustão, pó ou partículas abrasivas que podem criar desgaste nos diferentes componentes, ao mesmo tempo que mantem a viscosidade do óleo necessária para que as funções de lubrificação sejam cumpridas com os níveis exigidos pelo fabricante original.

The following describes the set of good practices that we recognize as actions that value the operations of changing filters of any kind in our car, remembering that these must always be done respecting the time intervals or routes recommended by each manufacturer and for each vehicle, in the appropriate spaces and with the right tool.

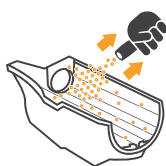

Tempering of the Engine

Hot oil is easier to remove to perform an oil filter restitution. If the engine is cold, keep it running for at least 10 minutes.

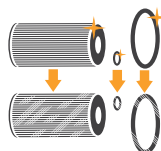

Draining the oil from the sump

In order not to contaminate the new filtering element with dirty oil, it is recommended to drain and replenish the entire oil circuit with new oil.

Cleaning and vacuuming of mounting bases

For the replacement of air or cabin filters the cleaning of the housings or mounting bases must be carried out, in order to avoid damage by the elements that have been left inside.

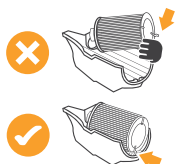

Replacement of sealing elements in mounting bases

Make sure to restore the entire filtering element, in some cases, the filter element includes a sealing element. This must also be replaced with the replacement of the filter

Lubrication of joints and seals

Before assembling oil or fuel filtering elements, it is recommended to apply the sealing gaskets of the device with the same product to be filtered to improve its sealing capacity.

Correct positioning of the filter element

Especially in "cartridge" filters that go inside housings or have a specific mounting position, it is convenient to ensure that it is in place, so that its functionality is not diminished.

Priming filters

Especially in "Spin On" type filters, it is advisable to pre-fill the worked fluid, so that, in cases such as oil filters, the engine does not run out of lubrication and damage is not caused to it.

Ensure of correct thread entry

Make sure that "Spin On" filters are aligned with their mounting base on the coupling, should not offer resistance, as this would mean that a proper coupling has not been performed.

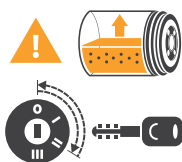

Tight fitting

The tightness of the "Spin On" type filters must be adequate, the degree of tightening is recorded on the filter. A poor or excessive tightness causes leakage or degradation of the seal.

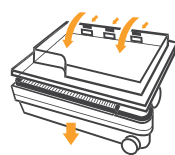

Ensure correct connections

Especially in filters with a multitude of connections, it is essential to ensure a correct assembly, considering the type of coupling in each case and checking the fastening of these after assembly.

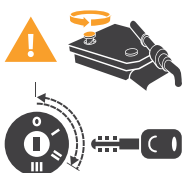

Feeding of circuits

Especially in petrol fuel filters, it is recommended before starting the vehicle, to prime the system by activating the contact without starting for 4-5 seconds.

Closed casings or cartridges

The assembly of all kinds of bases containing filtering elements must be done by acting on all its joining elements, executing the degree of tightening recommended by the manufacturer.

Air purge

Especially in diesel fuel filters, after assembly and before starting the vehicle, a thorough air purge is essential, failure to do so can cause incorrect operation.

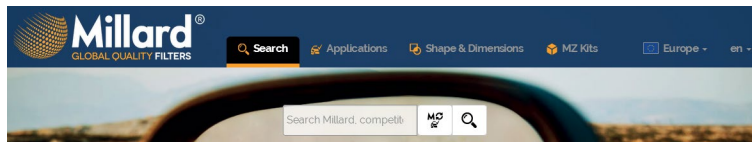

Leak inspection

Especially in oil or fuel filters, once replaced and after starting the engine and even making a trip, it is recommended to check the joints for leaks that can cause breakdowns.

	Oil		Fuel					Air		Cabin
	Ecological	Spin On	Ecological	Diesel DLF	In Line	Diesel Module	Spin On	Cylindrical	Panel	
Tempering of the engine	1	1								
Draining the oil from the sump	2	2

More powerful search

We have increased the power and usability of it.

When you perform a search, a drop down with possible results will be displayed.

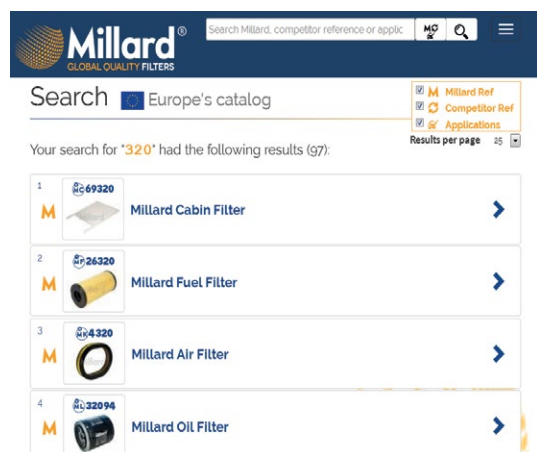

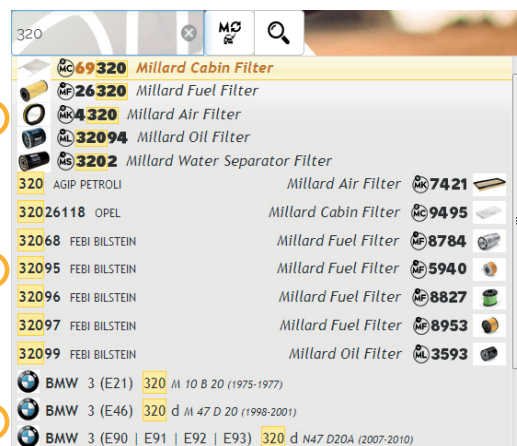

A first section with Millard references that match your search, a second section with references of competitors, and its equivalence in Millard.

A third section with the vehicles that match the search.

Millard References

Competitor References

Applications

If you wish, you can modify this behavior through the options button located immediately to the right of the search box and choose which results you want to consult.

If in the search box, instead of Enter, click on the system.  it will redirect you to a more extensive results page based on what is written in the search box.

On this results page, you can filter by result type by modifying the parameters in the upper right corner (Millard Products, competitors or applications). Depending on the number of results obtained, the results may be organized on several pages.

At the bottom of the page you will find the bar to navigate through all the results pages.

If you click on one of the results, you will access the details of them, be it a Millard product or an application.

Application section

We have also provided more functionality to the application search section.
 Now, in the drop down of brands, series or models, you can use the filtering box to quickly find the application you are looking for.

Applications Europe's catalog

Manufacturer

Select a manufacturer.

Under the product tab you will access the applications of your market.

It has a search box to filter on those same results, looking for any field that is filterable (brand, model, engine, power, year ...)

If you click on an application, it will be redirected to the detail of it, with all the items for which it applies.

MZ Kits Europe's catalog

MZ Section

We have improved the identification of the MZ, showing the brands for which the Kit applies.

Clicking on the kit, you will access the extended MZ file, obtaining information about its composition and applications.

Search from the website

To improve the user experience, we have incorporated a direct search box on our website (www.millardfilters.com).

This is on the right margin, and by deploying it, you can do a direct search in our online catalog.

The result of the search would be as shown below:

CABIN

FUEL

AIR

OIL
